

## PH-Basiczym helps with De-Acidifying!

**pH-Basiczym** is specially developed for people whose body is (heavily) acidified and to increase the alkalising / acid neutralising capacity. It contains a synergistic mix of minerals, enzymes, super foods and herbs. It also improves the functioning of enzymes in the body (digestion and metabolism).

The normal pH value of all tissues and fluids of the body (except the stomach) is slightly alkaline. The most critical pH value is that of the blood. All other organs and fluids fluctuate in their values to keep the blood at a pH value between 7.35 and 7.45 (slightly alkaline).

The body continuously corrects pH values in tissue and fluids to keep homeostasis/balance within this very narrow range. Too high a degree of acidification can have major consequences for the body.

If, for example, the blood is too acidic, the body corrects the pH value without taking other deficiencies into account. This can lead to symptoms such as heartburn, heartburn reflux, sensitive stomach, weight gain, weight loss difficulties, poor metabolism, mineral deficiencies, constipation, fatigue, dizziness, frequent urination, hypoglycemia, hormonal imbalance and muscle pain.

Research from Sunsplash took two years to ensure the formula development of the product pH-Basiczym. We believe this is the most effective alkalising product available on the market. The results are clear to see.
